Professional

CCI has been supplying professional quality knives and tools to Professional Chefs, the Food Service industry and Culinary Schools throughout North America for more than 60 years!

We provide and share professional knowledge with instructors, students and the food service community using knowledge gained from both industry training and experience.

Our philosophy is to supply professional quality products to students and those in the food service community. These quality products can be used both in the culinary lab and the professional, working kitchen.

Passionate

The CCI team is passionate about what CCI can contribute to Students, Chef Educators, Faculty and The Food Service and Hospitality Industries.

Every Year CCI donates awards to students in Canada and the USA.

CCI started sponsoring National and Regional American Culinary Federation Educational Symposiums for Culinary Educators over 25 years ago.

Ethical

CCI's Mission Statement dictates that we are to be Fair, Honest, Courteous and Professional at all times – regardless of who we are interacting with, Faculty, Student, Food Service Customer or a supplier.

We believe in respecting you, your time, and working for you! We are committed to being regarded as a firm that has outstanding integrity and long term customer relationships based on trust and ethical business behavior.

One Piece Hot Drop Forging

Click [HERE](#) to view a video of the Hot Drop Forging Process!

MASTERPIECE SERIES™

100% Made in Europe

Hand sharpening by skilled and dedicated craftsmen creates the perfect cutting edge angle. Keep the cutting edge sharp by steeling "little and often" with a sharpening steel.

X50CrMoV15 – the ideal combination of high carbon stainless steel, containing the alloys; Chromium, Molybdenum and Vanadium; tempered and hardened to the ideal 57 ± 1 HRC is your assurance of a high quality blade, that needs very little maintenance to perform perfectly every time.

The Classic full bolster located where the blade and the handle meet, works as a protective guard for fingers and adds weight and balance to the knife.

Polyoxymethelene (POM), has unique properties that make it ideal for knife handles. It can withstand virtually all solvents and has a high melting point. This means that it can be boiled and fully sanitized to meet all health and safety requirements. Under extremely high heat and pressure, the raw POM material attaches to the blade tang creating a secure bond between the blade and the handle. As a result, there are no gaps between the handle and the blade resulting in a perfect hygienic bond.

Special stainless steel compression rivets do not rust. These rivets are secured to each other inside the handle; this also fully secures the two handle scales to the full tang.

A full tang runs the entire length of the handle and provides the weight and balance demanded by professionals.

MASTERPIECE EUROPE SERIES™

100% Made in Europe

Advanced Measured Grinding (AMG) technology creates the perfect cutting edge on each blade for extremely long edge retention and exceptional sharpness. This new technique allows for optimal performance along the entire length of the blade.

X50CrMoV15 – the ideal combination of high carbon stainless steel, containing the alloys; Chromium, Molybdenum and Vanadium; tempered and hardened to the ideal 57 ± 1 HRC is your assurance of a high quality blade, that needs very little maintenance to perform perfectly every time.

One piece hot drop forging.
Forged in Germany.

The Advanced Modified bolster located where the blade and the handle meet, adds weight and balance to the knife while allowing for superior sharpening of the full cutting edge.

Thermoplastic Elastomer (TPE) has unique properties that make it ideal for knife handles. It is lightweight, slip resistant in dry and wet environments and sterilisable, providing a comfortable and secure grip. TPE is FDA approved.

The full tang runs the length of the handle and provides the weight and balance demanded by professionals.

ERGONOMIC PLUS™ WINEWOOD

100% Made in Europe

Hand sharpening by skilled and dedicated European craftsmen creates the perfect cutting edge angle. Keep the cutting edge sharp by steeling "little and often" with a sharpening steel.

X50CrMoV15 – the ideal combination of high carbon stainless steel, containing the alloys; Chromium, Molybdenum and Vanadium; tempered and hardened to the ideal 57 ± 1 HRC is your assurance of a high quality blade, that needs very little maintenance to perform perfectly every time.

The Granton Edge (or undulation) creates air pockets at the blade to prevent food from sticking to the knife. Granton blades are ideal for slicing ham or beef and whenever a perfect slice is desired.

Wider blade provides more knuckle clearance room and blade longevity.

The Full Tang handle provides the perfect balance demanded by professionals.

The richly colored Winewood handle combines the beauty of hardwoods and the strength and performance benefits of plastic. Carefully selected African hardwood veneers are impregnated with phenolic thermosetting resins. Under intense heat and pressure, multiple layers of these treated hardwoods are fused into a solid, homogenous material that is as beautiful as it is functional and strong.

Special Compression rivets don't rust and are tightly secured.

The Ergonomic Design improves productivity and comfort and helps reduce physical fatigue.

Sushi & Santoku Knives

Deba

The thick and heavy blade of the Deba knife allows it to be used as a light cleaver too. This knife is suitable for cutting, separating meat from bones and chopping vegetables. The Deba knife was originally designed and used to remove the heads of fish without damage.

Yanagiba

The Sushi Chef often considers the Yanagiba knife the most important. It has a fine point and a thin blade that make it a specialized slicer for preparing Sushi and Sashimi.

Santoku

SANTOKU means "three benefits" in Japanese. The Granton finish helps prevent the product being sliced from sticking to the blade. Excellent knife for cutting thin slices.

All knives are crafted using state of the art manufacturing technology, high carbon content steel hardened to 57±1° HRC.

BUTCHER KNIVES AND TOOLS

BONING/FILLETING KNIVES

Stiff Blade

The stiff blade is strong and rigid. A stiff blade is more often used for raw beef and pork.

Semi-Flexible Blade

A semi-flexible blade is often chosen when the Chef wants to work with just one boning knife. This blade has the benefits of both a flexible and a stiff blade. Used for fish, poultry, beef and pork.

Flexible Blade

The flexible blade is ideal for filleting raw fish. The flexible blade makes it perfect for removing skin and bones from raw fish and poultry too.

Curved Blade

The Professional Butcher may prefer to use a flexible, semi-flexible or stiff curved, "Offset" boning knife in a workplace setting. The butcher will be working in a standing position and will want to create a downward cutting action on a hanging carcass.

All knives are crafted using state of the art manufacturing technology, high carbon content steel hardened to 57±1° HRC.

NAMP Primal Cuts Guide

Click [HERE](#) for our full selection of Butcher Knives & Tools!

BUTCHER KNIVES AND TOOLS

Breaking Knife

The strong, rigid curved blade is used to "break" through skin, light cartilage, and small bones.

Butcher Knife

Primarily used by butchers, this knife can be used to split, strip or cut meat. The curved, thicker blade allows for a more efficient rocking or twisting motion and weight for greater leverage. It can be used to cleanly cut through skin, cartilage and small bones.

Scimitar

Primarily used by butchers to cut large pieces of raw meat. The butcher would use a scimitar to portion steak. Scimitars are typically 10 inches or longer.

Skinning Knife

Generally used for field dressing an animal.
Available in either heavy duty 3.25mm thick blade or polished 2.5mm thick blade!

All knives are crafted using state of the art manufacturing technology, high carbon content steel hardened to 57±1° HRC and NSF certified anti-slip handles.

Sharpening Steels & Stones

Professional Steel, #3 Cut

A Precision Cut Steel can be used to maintain the cutting edge of a knife. A few strokes on either side of the blade, every time the knife is used will maintain blade sharpness and ensure best cutting performance. This steel is highly recommended for use on high quality professional knives that are consistently well maintained.

"Double Sharp" Steel

The unique "Double Sharp" design combines both the "helical/spiral" and the "precision" cuts. The coarse "spiral" cut is ideal for putting an edge on a blunt (i.e. dull) knife blade. The "precision" cut (or "Continental" cut) has unbroken cuts running the length of the steel blade. In combination, the two cuts help to restore a blunt edge quickly and with continued use, help to maintain the restored edge. The edge will not be as fine as that produced by a precision cut steel.

Oval Steel

An "Oval Honing Steel" provides a wider sharpening surface than its round counterpart. A few strokes across the steel on each side of the knife blade will maintain blade sharpness and ensure best cutting performance. To keep the cutting edge at peak performance, a steel should be used every time the knife is used.

Smooth Polished Steel

The mirror like, polished finish of this sharpening steel is perfectly smooth. This very specialized steel is used almost exclusively in the butcher trade. It is used in combination with a #3 cut steel and is strictly meant for honing. This steel will re-align and maintain a razor like edge on an already sharp knife. A few strokes on either side of the knife blade, every time the knife is used will help to maintain the blade edge and maximize cutting performance.

Diamond Coated Steel

A diamond coated sharpening steel can be used when a honing steel will not work to restore a knife blade. The diamond coating will provide the abrasiveness needed to remove metal from the cutting edge.

SP1028

Lightweight Steel Blend
Knit Cut Resistant Gloves

- Spectra® fiber & steel blend
- Intense ANSI Cut Level 4 protection
- Low-linting for less product contamination
- **Reversible for increased wearability**
- **Bleached white**

Select your Size:

To determine your glove size, wrap a tape measure around the palm of your dominant hand just below the knuckles. Do not include your thumb. The measurement in inches is your numerical glove size. For gloves sized by letter, the following chart details which numerical sizes best correspond to each letter size:

Hand Size In Inches	Size	Hem Color
6	XS	Grey
7	S	Blue
8	M	Green
9	L	Red
10	XL	Black
11	XXL	Yellow

100
